## Estimated Breeding Values

While index based selection is important it is also crucial to look at individual trait EBVs for a ram and match them to your flock. Different rams can have the same terminal sire index but with different combinations of EBVs. It should be remembered that stock selection should be made on what pleases the eye and suits your flock and breeding system. Figures (EBVs) should be used as a tool to assist this selection and give supporting information about genetic influences that you cannot see.

Signet's new monthly, mixed breed analysis increases the commercial focus of existing traits and introduces a series of new EBVs.

Weight adjusted traits - Please note that carcase traits are now weight adjusted. This means that EBVs are a better prediction of carcase composition at a fixed weight as opposed to the previous method of adjusting for age.

  - (b) that the incapacity is not the result of any apparent injury, accident or illness and
  - (c) the Veterinary Surgeon has inspected the Purchaser's ewes and found them to be in normal, responsible breeding condition; then the Purchaser shall have the option of, either a refund of the purchase price, or accept a ram of similar quality. If the Vendor so wishes he shall be entitled to have access to the ram for a veterinary examination. If a settlement is not reached then an independent arbiter shall be appointed by the Auctioneers and his decision shall be final. ### SCANNING OF IN LAMB EWES

All ewes sold in lamb or running with a ram will be scanned on the morning of the sale.

The ewes will be sold on this scanning result only and in preference to any other scanning result the vendor may have obtained. Any empty ewes will be marked with a green mark and may still be sold as empty in same catalogue order. The Society accepts no responsibility for the accuracy of the scanning results although every effort will be made to ensure the results are inline with national averages.

Show to commence at 10.30am.

## About the breed:

'Roussin de la Hague' sheep are carefully bred in France through a Normandy-based progeny testing centre that require rams to attain eligibility criteria for performance and scrapie status to be considered for nomination. Ram progeny are monitored and graded and sold annually at a sale in Joburg.

The first major influx of Roussin sheep into the UK was around 1990. Since then the breed has grown in popularity, with a reputation for lambing ease, mothering and prolificacy whilst retaining a compact muscular carcass to produce a 'market specification' lamb. Today rams are purchased frequently by many different buyers ranging from outdoor-lambing hill flocks in the Scottish Highlands to lowland terminal cross flocks looking to lamb ewe hogs with the option of retaining females as replacements.

Today, all UK Roussins are genetically evaluated through a whole breed analysis for traits including prolificacy with some breeders are recording additional traits like growth rate, muscling and fat depth.

## Pre sale show:

Roussin entries will be judged at 12.30am on 28th September.

## Inspection:

A committee panel is responsible for inspecting entries based on soundness for commercial requirements.

## Remote bidding:

Online bidding will be made available for this sale and telephone bids will be taken. Contact details are on the front of this catalogue to register.
