texelplus indexes have been updated, making them simpler to use and understand.

In simple terms: **higher value = higher profit per lamb**

The texelplus economic indexes support the breed's development with an increased focus on commercial traits and profitability. The **TERMINAL** and **REPLACEMENT INDEXES** reflect the breed's influence on industry. Both are presented as the potential extra profit per lamb born in a commercial setting, compared to the population average.

Index	Average	Top 25%	Top 10%	Top 5%	Top 1%
Terminal Expected change in profit per terminal lamb born	£4.03	£5.13	£6.12	£6.71	£7.81
Replacement Expected change in profit per replacement lamb born	£4.23	£5.37	£6.40	£7.01	£8.17

The **TERMINAL INDEX** supports increased profitability through improving prime lambs and is weighted strongly for meat production. The **REPLACEMENT INDEX** includes additional maternal traits to optimise production of female replacements.

Commercial producers solely producing prime lambs should use the **TERMINAL INDEX** to inform their selection; however, those retaining female replacements should use the **REPLACEMENT INDEX**.

Sub-indexes underpin the indexes to provide more information on the relative values of growth, carcass quality, reproduction, and adult size.

An example

High ranking rams deliver almost £5.00 per lamb more than lower-ranking rams. Over a ram's working lifetime, this is easily worth an extra £1,000 per ram; generated through shorter finish times and improved carcass quality.

Trait weighting

Different emphases are given to individual traits between the terminal and replacement indexes. This results in different sub-index values.

Reproduction sub-index

The commercial benefit of lambing ease, litter size and maternal ability. Promotes optimum litter sizes and better mothers.

Adult size sub-index

The benefit of mature size as a replacement ewe. Promotes smaller animals as they require less maintenance.

Growth sub-index

Captures the benefit from growth using eight-week weight and scan weight information. Faster growth is more advantageous.

Carcass sub-index

The value of muscle and fat weight in the carcass. Encourages muscle growth with fat cover.

Accuracy

A measure of accuracy of the index. The higher the number the better.

Ranking

Where the animal ranks compared to the current average animal.

Index values

The sum of the sub-index values and potential profit per lamb born for terminal and replacement production.
